

UNDERGROUND DIVISION

Firms Role: General Contractor

Location: Albany, Oregon

Owner:
Oregon Department of Transportation

Designer Reference:
David Evans & Associates

Start Date: May 2004

Completion Date: March 2007

Contract Delivery Method: Design/Bid/Build

Description of Work:

The Albany Regional Multimodal Center project consists of utility and site improvements to the seven-acre Albany Train Depot, including the historic renovation of two existing train station buildings. Site improvements included underground water, sewer and storm drain upgrades; disposal and treatment of petroleum contaminated groundwater; removal of underground storage tanks; removal of hazardous material from four existing buildings; and construction of paving and walks, bike racks, drinking fountains, bus shelters and benches. Construction occurred while the Union Pacific, Portland & Western and Amtrak railroads continued to operate at the project site.
